QwikEyes

- Your personal Video Assistant!
- Makes use of Hybrid mobile technology; Use it on an Apple / Android / Windows device alike.
- What do you need? – A smart phone with a built in camera. That's it!
- Accessibility option.

How it all started

- Bryan Duarte's brain child.
- Qwik Eyes was accepted into LaunchPoint, a technology accelerator in Mesa in 2013
- Featured at the 2014 meeting of the Clinton Global Initiative University, an annual event that brings together college students to address global challenges with practical, innovative solutions.

Background Surveys

- Blind people constitute of nearly 36% of the US population. More than half of them constitute of the general workforce.

User Perspectives

Current Available Tech

Factors Affecting Tech Development

- Dedicated to just one type of work
- Cost
- Bulk
- Social Stigma

Evaluation

- Get down to the basics.
- What do they need? - A “human touch” to technology.
- Where do they need it? Everyday life activities – Reading, Cooking, Navigation, Social interactions to name a few.
- Why QwikEyes? – Help you get back a sense of independence.

Cooking

Navigation

How we built it – Back-End

- **Python:** To piece all our code together.
- **Amazon EC2:** A web service that will help us deploy our web app on the cloud and interact with our services to build a fast and scalable back-end.
- **MongoDB:** to create our Database schema.
- **PyMongo:** A Python distribution containing tools for working with MongoDB.

How we built it – Front-End

- **Ionic Framework:** easy-to-use APIs to create a simple UI for the mobile application using HTML, CSS and JavaScript.
- **WebRTC:** to build peer-peer connections between “Client” and the “Service Provider”.
- **eFace2Face:** Apache Cordova plugin that exposes full WebRTC JavaScript APIs for iOS applications.
- **Adobe PhoneGap Build:** a standards-based, open-source development framework for building cross-platform mobile apps.

Future add-ons

- Call starts directly on speaker
- First ring followed by an automated greeting, to let the caller know the call has been placed.
- Finger-print authentication for iPhones.
- One touch social media login.

Future Work

- We seek to make this application accessible to larger groups of people.
- QwikEyes aims to augment the lives of the blind in the areas of education, profession, personal and social interaction; A complete mental and physical growth.
